

Kinetic Sprint, Cadence and Street E-bikes from EBH

The clear technology leader in value-priced electric bikes, Kinetic fleet series e-bikes come in medium and large frames. Colours are black, white, yellow, silver, red, blue, and green.

Kinetic controllers, motors and other critical electronic equipment are designed by the renown Justin Lemire. Our Sony hi-cap celled lithium batteries are known for durability, ease of use, sheer capacity and tested to EU required UN38.3 safety certification.

Alloy rear rack that hauls 25kg.

Suspended cush seat

Axa lock framelock

LED F&R lighting

Optional sturdy basket installed on alloy frame. Strong, rust-resistant and perfectly handy for commercial or personal use.

The Kinetic 300 watt front hub motor. Made in the eZee factory, it is 20% more powerful than the EU standard, tough enough for commercial use & standard on the our NZ bikes.

The eZee heavy-duty wheel. It starts with the internal Nexus gearing on sealed bearings, radiates outward with Scavik cargo bike stainless spokes, connects to a German Weinman double-wall rim and hits the road with a German Schwalbe Marathon-Plus puncture-resistant tyre. The rack and wheels can take real loads on real journeys, year after year, in any weather.

The Shimano Nexus Seven speed internal Hub. Shifting through all its gears from a standstill, it is far superior to a derailleur for service work. A premium hub, it takes near-zero maintenance and provides maximum usability. It is sealed from dirt and moisture, and the chain cannot fall off. Includes the roller-disc brake.

Centre stand, if you use a centre stand, you will never want to use a side stand again. A must for real transport as loading the bike is done securely in the upright position.

Stainless Steel Hardware- The years and weather are kind to eZee bikes in part because eZee uses stainless hardware for the mudguard stays, brackets, torque arm, and almost all fasteners attached to the bike.

The preferred e-bike in commerce and government is also great for rail trails and commuting. The components are name brand German and Japanese sourced and the assembly is superbly done.
